

QGIS Application - Bug report #15969

categorized labeled layers with virtual fields crash qgis

2016-12-11 06:42 AM - Gerhard Speles

Status: Closed	
Priority: Severe/Regression	
Assignee:	
Category: Labelling	
Affected QGIS version: 2.18.0	Regression?: No
Operating System: win	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: Yes	Copied to github as #: 23885
Description	
When you label categorized layers with virtual fields (e.g. \$area), QGIS crash, when visibility is toggled on/off. Testproject is attached	

History

#1 - 2016-12-15 08:05 AM - Saber Razmjooei

- Priority changed from High to Severe/Regression
- Target version changed from Version 2.18 to Version 2.14

It is even worse in 2.14

Marked it as regression and hopefully the fix will be backported to 2.14

#2 - 2017-02-28 02:03 PM - Giovanni Manghi

- Target version changed from Version 2.14 to Version 2.18
- Status changed from Open to Feedback

I cannot replicate with the attached project and data on Windows and 2.18.4
can you test if in this version is fixed?

#3 - 2017-03-05 12:33 PM - Gerhard Speles

- File qgis2_18_4_crash_categorized_layer.jpg added

Just tested it with 2.18.4, win 10 and QGIS crash when toggling e.g the layer "second", categorie 1 from "on" to "off".
Screenshot is attached.

still cannot replicate. Please test with a clean environment, by disabling/removing all the 3rd party plugins, removing the .qgis2 folder (you may want to make a backup first), etc.

#5 - 2017-03-06 06:15 AM - Gerhard Spieles

Tested it again with a fresh installed QGIS and no crash happens.

Also no crash on this machine, when I install the same 3rd party plugins.

The problem seems to be caused by earlier version-entries in the .qgis2 folder or registry entries.

Thank you for the hints and the issue can be closed.

#6 - 2017-03-06 06:45 AM - Giovanni Manghi

- Resolution set to not reproducible

- Status changed from Feedback to Closed
