

QGIS Application - Bug report #16043

WFS-T Broken in QGIS 2.18.* with Geoserver Endpoints

2017-01-06 12:17 AM - Giovanni Manghi

Status: Closed	
Priority: Severe/Regression	
Assignee: Alessandro Pasotti	
Category: Web Services clients/WFS	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 23958
Description	
Works as expected on LTR.	
Tested with several datasources, PostGIS included.

[bugfix] WFS-T Fixes #15597 #16043

This commit fixes a few bugs on WFS-T with servers that support WFS-T > 1.0.0 when user configure version != 1.0.0 ("auto" is the default).

It also fixes WFS-T multiple operations on GeoServer when an insert operation is among them and the feature store does not return generated feature ids for the inserted features (i.e. shapefiles).

Tested on GeoServer and QGIS Server

History

#1 - 2017-01-06 12:21 AM - Giovanni Manghi

Works as expected using QGIS Server.

To replicate just fire a Geoserver instance (tested 2.8 and 2.9 here), import a layer, enable wfs-t.

#2 - 2017-01-13 05:04 AM - Alessandro Pasotti

- Assignee set to Alessandro Pasotti

- Affected QGIS version changed from 2.18.2 to master

Confirmed:

2.14 WFS-T works fine with QGIS Server and GeoServer

2.18 WFS-T works fine with QGIS Server and fails with GeoServer

master WFS-T works fine with QGIS Server and fails with GeoServer

#3 - 2017-01-13 05:46 AM - Giovanni Manghi

it work if forcing version to 1.0.

#4 - 2017-01-13 07:39 AM - Alessandro Pasotti

Basically: WFS-T is only implemented for 1.0.0, unfortunately the user does not know that because the developer did not implement any way to warn the user.

What happens is that GeoServer supports 1.0.0, 1.1.0 and 2.0.0, the default "auto" value will fetch the highest.

qgswfscapabilities.cpp line 478 (2.18):

```
// TODO: remove me when WFS-T 1.1 or 2.0 is done
if ( !mCaps.version.startsWith( "1.0" ) )
    return;
```

Quick fix: change the default value in the WFS dialog from "auto" to 1.0.0 until the implementation is complete.

#5 - 2017-01-14 04:59 AM - Alessandro Pasotti

There might be another issue in 2.18 and master:

Step to reproduce in GeoServer:

- enable WFS transactional in GeoServer

- add a WFS-T GeoServer shapefile layer to QGIS, set version=1.0.0

- enable editing

- add a new feature
- save
- end editing
- enable editing
- add a new feature
- save
- end editing
- zoom in/out to refresh the canvas

Expected result: 2 new features appear in the map

Actual result: only 1 new feature appears in the map (the first added feature).

Note: the second feature was actually inserted in GeoServer, the problem is that QGIS does not notice it

#6 - 2017-01-14 05:28 AM - Alessandro Pasotti

The reason for the observed behavior is that GeoServer always return new0 as the feature id if the feature store does not support id generation as happen in shapefiles.

#7 - 2017-01-14 05:44 AM - Even Rouault

The reason for the observed behavior is that GeoServer always return new0 as the feature id if the feature store does not support id generation as happen in shapefiles.

Ouch, sounds like an issue of the server. The returned id is supposed to be unique...

#8 - 2017-01-14 06:33 AM - Alessandro Pasotti

It's unique within a single transaction.
