QGIS Application - Feature request \#16148
legend of proportionate circles: circles should be centered, not left justified

Description

When creating a legend of proportionate circles in the map composer, the circles are drawn left justified.
It would be nice if they were centered, or if the user could at least chose to center them.
I'm attaching an image to show the problem.

I'm classifying this as a feature request but hesitated to classify it as a bug since IMHO the current solution does not make the legend usable for professional cartography.

- Easy fix? set to No
\#2-2017-08-13 05:50 PM - mlennert -
- Description updated

Is this really so difficult to fix ? All circles should "just" be centered at $x=$ diameter of largest circle $/ 2$.

This really makes the legend look very bad...

have you checked qgis master? there have been changes in this area there. Or have you considered supporting the fix? Cheers!

It already works in $2 . x$ - just make sure your legend symbol width setting is large enough to fit your largest symbol.
