QGIS Application - Feature request #1619
v.what.vect: field name with dropdown

2009-04-02 03:09 PM - Paolo Cavallini

Status:	Closed		
Priority:	Low		
Assignee:	nobody -		
Category:	GRASS		
Pull Request or Patch supplied:		**Resolution:**	fixed
Easy fix?:	No	**Copied to github as #:**	11679

Description

The GRASS module v.what.vect require the user to enter the field name by hand instead of with a dropdown menu. This is cumbersome and error prone.

History

#1 - 2009-06-12 09:37 AM - Lorenzo Masini

Same behaviour for all modules that require to specify a field from database.

#2 - 2010-01-06 04:17 AM - Redmine Admin

- Resolution set to fixed

- Status changed from Open to Closed

You just need to use field tag instead of option in qgm.

There was also a bug and field tag's layer attribute was ignored (first layer was used (first option in fact)), but it is fixed in changeset:12679.
