Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	24130

Description

Starting to use the Log Messages Panel during development more often, I think I hit the following issue:

Pressing the escape button while Log Messages Panel is undocked/floating, minimizes the panel irreversible.

Only a restart of QGIS makes it usable again.

To test (see screendumps):
- starting with a normal docked panel
- undock.make it float it via little icon in right corner
- click in the floating panel to make it the active one
- press the escape button (would normally close that window?)
- the panel minimizes it shape (hiding the tabs you normally see)
- you cannot resize the panel anymore
- even docking it again hides all information

I'm on Debian testing here, not sure if Windows has the same problems....
Tested both in master, 2.14 and 2.18

History

#1 - 2017-02-23 02:10 AM - Richard Duivenvoorde

Tested this on a Windows server, and here is is also an issue, but the issue is a little different:

- with a floating panel, press 'escape' then the panel is fully hidden (not resized to a minimum as you see on Linux).
But you cannot open it anymore too. Clicking the open message button in rightbottom corner of QGIS does NOT open the panel anymore...

#2 - 2017-02-24 06:12 AM - Jürgen Fischer

- Status changed from Open to Closed

Fixed in changeset commit:"e0c58eb7d7c1da5891bb4ee37a4ed8548c3ac1d1".
