

QGIS Application - Bug report #16334

Processing - Running a model freezes QGIS

2017-03-09 11:58 AM - Magnus Nilsson

Status: Closed	
Priority: High	
Assignee: Victor Olaya	
Category: Processing/Modeller	
Affected QGIS version: 2.18.4	Regression?: No
Operating System: Windows 10 64 bit	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 24244
Description	
When I run a model with the green arrow to the right of the file path selected, QGIS freezes.	
QGIS 2.18.4, 64 bit.	

History

#1 - 2017-03-09 12:10 PM - Giovanni Manghi

- Target version deleted (Future Release - Lower Priority)
- Status changed from Open to Feedback
- Priority changed from Normal to High

Can you attach the model (and the data, or a sample)?

#2 - 2017-03-11 03:30 AM - Magnus Nilsson

- File Roads.model added

This seems to happen with any data or model that I use. I have tried several SHP files and models and QGIS still freezes. Try with the road network from <http://download.geofabrik.de/europe/liechtenstein.html> for example. I have attached a simple model.

#3 - 2017-04-11 04:37 AM - Alexander Bruy

- Status changed from Feedback to Closed
- Resolution set to worksforme

Can't reproduce with latest point release 2.18.6. Please reopen if necessary and provide detailed steps to reproduce.

the point is that that green arrow serves to run the tool/model iterating all input features. If input features are a lot the preparation phase take a long, if you leave it do its thing long enough at same point the tool/model starts.
