QGIS Application - Bug report #16398
QGIS hangs when creating or testing a virtual layer when the sql is wrong

2017-03-30 11:37 AM - chris Mr

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Virtual Layers			
Affected QGIS version:	2.18.3	**Regression?:**	No	
Operating System:	MacOS	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	not reproducable	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	24307	

Description

If you go to add a virtual layer, and the add sql like this:

select gid as kml_key, sa.*
from service_areas

but forget to include the column alias for service_areas, QGIS just hangs without error, and the
QGIS process remains at 99% cpu too-

History

#1 - 2017-04-30 03:11 PM - Giovanni Manghi

- *Description updated*

- *Priority changed from Normal to High*

- *Status changed from Open to Feedback*

- *Category set to Virtual Layers*

Or I cannot replicate or I don't understand completely the description. Can you attach a small dataset?

#2 - 2017-05-01 01:01 AM - Giovanni Manghi

- *Easy fix? set to No*

- *Regression? set to No*

#3 - 2017-05-26 05:11 PM - Giovanni Manghi

- *Resolution set to not reproducable*

- *Status changed from Feedback to Closed*

Closing for lack of feedback.
