Pull Request or Patch supplied:	Resolution:
Easy fix?: No	Copied to github as #: 24329
Description	
<p>Good morning,</p> <p>In the "add postgis Layer" tool, when I list the available tables in the database, the height of each row is set automatically to show all of the content of each column.</p> <p>In my case, it is generally the comment column that set the row height. I like to comment database objects in PostgreSQL (for example to store the query I wrote to create the table).</p> <p>As you could see in the attachment, it would be quite useful to set a default and fixed row height in the list, which could be modified with the mouse if I want to read the whole comment.</p> <p>Mathieu Bossaert</p>
