QGIS Application - Feature request #16460

Don't break text into separate characters when exporting curved labels to SVG

Description

When exporting labelled layers from composer to SVG straight labels get exported as text objects broken into words. I.e. 'My label' ends up with two text objects: 'My' and 'label'.

When label is curved along line, then it gets exported as lot's of single-character text objects. This makes it very hard to work with them in vector editors like Inkscape or Illustrator.

SVG supports labels along path, so this is a much better way to export curved labels, instead of breaking them apart.
