

QGIS Application - Feature request #16464

Toggle Tracing Tool

2017-04-24 06:59 AM - Philip Tait

Status: Closed	
Priority: Normal	
Assignee:	
Category: Digitising	
Pull Request or Patch supplied:	Resolution: invalid
Easy fix?: No	Copied to github as #: 24373
Description	
<p>I hope this is the right place to post this. The Tracing tool found on the 'Advanced Digitizing' Toolbar is a really great tool. But sometimes when I'm using it a lot to create geometries that "hop" from one geometry to another unconnected geometry, it is a bit of a hindrance having to manually turn off/on the tool each time.</p> <p>Perhaps to improve usability when the Tracing tool is turned on there is also the ability to temporarily disable the tool by pressing-holding the ctrl key (or a different key). This way the user can still draw the geometry, and when they release the ctrl key they can continue with tracing.</p>

- Easy fix? set to No

#2 - 2017-05-22 04:55 PM - Regis Haubourg

- Status changed from Open to Feedback

- Category set to Digitising

- Description updated

Hi, I tried to reproduce in master and didn't have to turn off tracing to change between disconnected geometries. I just do a left clic on the exit point from first geometry and another one on the entry point on the next geometry.

Would that work for you?

Already there and in a IMHO better configuration: Just press "T" enables and disables the tracing.

Cheers @Harrissou Satanna, I didn't know about the 'T' button, does exactly what I needed it to. I guess this issue can be closed now...any ideas how to do that? Thanks again for the help.
