Easy fix?:	No	**Copied to github as #:**	24387

Description

I did not find a concave polygon tool that behaves as I (and I presume many others) expect: to me the parameter to choose is the max length of the segment, whereas the existing tools seem to allow the choice of the proportion of convex polygon covered.

I have tried:

- QGIS Concave Hull in Processing
- Concave hull (k-nearest-neighbors) from plugin Concave Hull (this
  works differently, and has the useful option of creating multiple hulls
  based on a field)
  as well as:
- PostGIS ST_ConcaveHull
