Pull Request or Patch supplied:	Resolution:
Easy fix?: No	Copied to github as #: 24418
Description	
<p>When using perimeter label placement, could there be a way to offset the label's position along the line from its default placement? This could be either an offset by millimeter/map unit, or perhaps a selection to place the label near the start, center or end of the linestring (similar to existing options for marker placement in the marker line symbology).</p> <p>This would be useful when a line or polygon has multiple labels from different fields, to avoid clustering of labels at the center of the map extent or linestring.</p>

Edited to add: this would also apply to labels located along polyline features.
