### Description

Hey \*,

I wanted to install the OpenLayersPlugin and got the Error Loading Plugin:

The plugin is broken. Python said:  
cannot import name QtWebKit

I'm using QGIS 2.18.7 and Kubuntu 17.04

I think the PyQt4.QtWebKit is not in the Ubuntu repositories anymore.

Luckily the QuickMapServices Plugin is working but the OpenLayersPlugin not. Maybe this error also affects other plugins?

Any suggestions?

### History

**#1 - 2017-05-17 01:07 PM - Giovanni Manghi**

- Resolution set to invalid
- Status changed from Open to Closed

You must report the plugin issue to the plugin authors, is not part of core QGIS. Thanks!
