Description

Hello,

while trying to install plugins (in this case the semi-automatic-classification plugin) for machines in a computer pool (win 10 x64 environment), it was not possible to install plugins for all domain-users respectively as an admin. Is it generally possible? I am not exactly versed in the mechanics of functioning concerning QGIS and it's plugins, but in my growing distress i decided to approach you with this problem. The users have to re-install the plugin every time they access the machine. Do you have any ideas? The version is QGIS 2.18.4.

Thank you very much for your advice,

best regards
