<b>Description</b>			
<p>Hello, can 2.18.7 be run under 32-bit XP? I initially got a startup error that Normaliz.dll could not be found. That DLL came with IE8 (I don't use IE so mine was still at IE6). I was able to update to IE8, only to have QGIS throw a new startup error -- cannot locate entry point GetTickCount64 in KERNEL32.DLL. I'm reading this may be an indication the application was compiled for Vista or newer. I did not have this problem with 2.18.5-2. Should 2.18.7 run under XP? Thanks.</p>

- File qgis.jpg added

Uninstalled, then downloaded 2.18.8. I'm getting the same error message (attached). Has this been resolved?

Downloaded the standalone? As said it's only fixed in OSGeo4W.
