QGIS Application - Bug report #16585
Cannot run Windows 2.18.7-1 under 32-bit XP

2017-05-19 08:02 PM - Duane Schrag

Status:	Closed		
Priority:	Normal		
Assignee:	Jürgen Fischer		
Category:	Windows Package		
Affected QGIS version:	2.18.7	**Regression?:**	No
Operating System:	Windows XP 32-bit, SP3	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	24487

Description

Hello, can 2.18.7 be run under 32-bit XP? I initially got a startup error that Normaliz.dll could not be found. That DLL came with IE8 (I don't use IE so mine was still at IE6). I was able to update to IE8, only to have QGIS throw a new startup error -- cannot locate entry point GetTickCount64 in KERNEL32.DLL. I'm reading this may be an indication the application was compiled for Vista or newer. I did not have this problem with 2.18.5-2. Should 2.18.7 run under XP? Thanks.

- File qgis.jpg added

Uninstalled, then downloaded 2.18.8. I'm getting the same error message (attached). Has this been resolved?

Downloaded the standalone? As said it's only fixed in OSGeo4W.
