

QGIS Application - Bug report #16620

gdal tools in raster menu defaulting to output MSGN instead of GTiff

2017-05-25 06:33 PM - Donovan Cameron

Status: Closed	
Priority: Normal	
Assignee:	
Category: GDAL Tools	
Affected QGIS version: 2.18.8	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: invalid
Crashes QGIS or corrupts data:	Copied to github as #: 24520

Description

Noticed this from the OSGeo4W installed version on Windows 10 (qgis-rel-dev, daily build of release branch).

Used the merge and warp tools found in the raster menu but even when you browse to designate the output file with .tif extension, the command actually uses -of MSGN

I think it's supposed to use -of GTiff instead.

- Easy fix? changed from Yes to No
- Status changed from Open to Feedback

I just tested on 2.18.8 qgis-rel-dev and cannot confirm both using the "old" gdal tools (that if it has a bug it would not be fixed anyway) as also the Processing toolbox. Tested with warp.

#2 - 2017-07-06 12:32 AM - Donovan Cameron

Tested in 2.18.10 and looks like the tools are now working as expected =)
