

QGIS Application - Bug report #16678

Locator Filters option: Resizing the columns in the frame behaves weirdly

2017-06-07 12:53 PM - Harrissou Santanna

Status:	Feedback	
Priority:	Normal

Affected QGIS version:	master	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 24577
Description		
<p>I guess a screencast would be more explanatory but I fail to find a proper way to do it in my current PC (or if someone else can confirm and make it...).</p> <p>In the settings --&gt; Options --&gt; Locator, locator filters, you can't just select the vertical separator between two columns and move it to the right or the left to reduce/enlarge the adjacent columns; eg resizing the first columns is instead done by moving the separator between the second and third columns. The first separator can't be selected.</p>
