| Description | |
| <p>While there are a lot of feature-centric functions, there is no function to get layer as a whole with it's properties. It would be nice to have a <code>get_layer('layer_name')</code> function, returning a layer object. And complementary functions like <code>feature_count(layer)</code> and <code>extent(layer)</code> etc. that use layer object as input and return it's properties.</p> | |
