<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> fixed/implemented
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 24634
<b>Description</b>		
<p>In the input area of the Python Console, type <code>_api</code></p> <p>Normally, it should open the online API documentation of the QGIS version you are calling it from (e.g. <a href="https://qgis.org/api/2.18">qgis.org/api/2.18</a>). Instead it opens the master API (<a href="https://qgis.org/api">qgis.org/api</a>).</p>
