

QGIS Application - Feature request #16828

Multi-attribute search should support embedded forms/relations

2017-07-10 01:00 PM - Andreas Neumann

Status:	Closed	
Priority:	Normal	
Assignee:	Matthias Kuhn	
Category:	Forms	
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 24727
Description		
Multi-attribute search (Ctrl-F) only support search/filters in one table.		
It would be very useful to also support filters in related/nested sub-forms.		
E.g. for two tables, table A (countries) and table B (cities) which have a common key (e.g. the country code), one should be able to filter countries that have relations to cities with more than 2 million population.		

History

#1 - 2017-10-23 11:11 AM - Andreas Neumann

- Assignee set to Matthias Kuhn

#2 - 2019-03-28 11:56 AM - Andreas Neumann

- Resolution set to fixed/implemented

- Status changed from Open to Closed

Is implemented in recent QGIS versions.
