

QGIS Application - Feature request #16832

Sorting in side column of form view

2017-07-10 02:03 PM - Andreas Neumann

Status: Closed	
Priority: Normal	
Assignee: Matthias Kuhn	
Category: Forms	
Pull Request or Patch Supplied:	Resolution: fixed/implemented
Easy fix?: No	Copied to github as #: 24731
Description	
<p>The attribute table has two modes:</p> <ul style="list-style-type: none">- table mode- form mode <p>The form mode has a side column where one can choose a side column or expression to be displayed for the identification of individual features.</p> <p>We suggest that the sort mode between table mode and form mode should be decoupled. Changing from the table mode into the form mode should trigger a resort based on the chosen column or expression, if the sort mode in the table view was different from this sort mode in the side column.</p> <p>Otherwise the user has to manually sort the side column whenever he changes into form mode, to be sure that the features in form mode are properly sorted.</p>
