

QGIS Application - Feature request #16844

New node tool - allow to batch select vertices between two points

2017-07-11 10:14 AM - Regis Haubourg

Status: Closed	
Priority: Normal	
Assignee: Martin Dobias	
Category: Digitising	
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Easy fix?: No	Copied to github as #: 24743
Description	
<p>Selecting vertices with the new node tool can be made using a clic and drag rectangle and shift / ctrl modifier keys. For big geometries, allowing to select all vertices between two places would be a big enhancement. Mapinfo has such a behavior.</p> <p>Ergonomy still needs discussions, it could be:</p> <ul style="list-style-type: none">- additional modifier keys to select first and second point + a key to change the rotation direction for polygons- add a contextual menu with documented actions (display node editor / select first point / select last point) . This has the advantage of letting user see the key shortcuts and learn them more easily.
