

QGIS Application - Bug report #16908
Certain Plugins crash the processing tool 2.18.10

2017-07-21 01:55 PM - Tyler Veinot

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	C++ plugins/Globe	
Affected QGIS version:	2.18.10	Regression?: No
Operating System:	Windows 7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 24807
Description		
<p>When I install Networks Plugin or the Profile Tool (https://github.com/crocovert/networks/ or https://github.com/etiennesky/profiletool) the processing plugin crashes with the error;</p> <p>2017-07-21T08:32:52 1 Failed to load C:/OSGeo4~1/apps/qgis/plugins/globeplugin.dll (Reason: Cannot load library C:/OSGeo4~1/apps/qgis/plugins/globeplugin.dll: The specified module could not be found.)</p> <p>When I install the Profile Tool Processing, QField Sync, and qgis2web are unable to load.</p> <p>I have had all these tools working in 2.18.10 the only thing I changed recently is installing Q Server LTR using the OSGeo4W installer and postgresql. The Q Server is now uninstalled. I tried reinstalling QGIS as well as complete removal and reinstall. deleted the .qgis file and reinstalled the plugins but I still get the same behavior with those 2 plugins. I copied the python window messages into txt files attached below; one with the networks plugin the other with the profile tool. I really enjoyed these tools and would like to get them back if possible. I also posted this behavior on the tools issue trackers because I am not sure if it is something with the tools or something in QGIS or something I did to my own system.</p> <p>Thanks for the help.</p>

Are those plugins Processing ones, or normal ones?

You can start by disabling the "globe" core plugin in the plugin manager.

You should also remember that if a 3rd party plugin does not work as expected or causes issues in QGIS then you should file a ticket in the plugin bug tracker, not here.

It seems also that you may have a unclean environment, please try clarify/clean then report back.

#2 - 2017-07-21 02:18 PM - Giovanni Manghi

- Category changed from Processing/Core to C++ plugins/Globe

also the error message in the description has nothing to do with Processing. Could you clarify and add steps how replicate the issue?

#3 - 2017-07-21 03:04 PM - Tyler Veinot

They are normal plugins, as for the environment I also have ArcGIS with its own python versions which has caused issues in the past. I did put tickets with the 3rd party plugins as well, IZ wasn't sure where the error was and I have been working on this for a few days now.

So I cleaned my environment some and also found my GRASS and SAGA tools were all disabled, I again uninstalled everything and this time went into my environment variables and removed all OSGeo and QGIS referenced paths. Reinstalled everything and now I have my GRASS and SAGA back. I also installed the profile tool and didn't get any errors. I am confident at this point the issue is something solely my doing.

Sorry to have bothered you, you can close/delete this issue.

Thanks for the help, you did guide me to where the issue was.
