Crashes QGIS or corrupts data:	No	Copied to github as #: 24817
Description		
<p>If I have a symbol composed by 2 simple symbols and one of them is rotated, when I apply a rotation to the composed symbol this is plotted wrong in legend and TOC (the two part are no more reciprocally rotated of 90°).</p> <p>eg:</p> <ul style="list-style-type: none">- I made simbol "giaciture" composed by two lines reciprocally rotated of 90°- I apply a rotation to "giaciture" driven by a field 'immersione'- Symbol are correct in map composer but not in legend and TOC. <p>try with attached example.</p> <p>Tested on QGIS 2.18.10 on linux MINT 18.</p>

see attached screenshot: maybe the missing field is the reason for what you observe?

no, I presume.

I've just retried giacitura.gpkg package data and I haven't got missing field.

I've also tried with QGIS 2.99 and I have the same behaviour.
