

QGIS Application - Bug report #16951

Error when trying to publish map using QGIS Cloud Service

2017-08-01 10:51 PM - Ross Combs

Status: Closed	
Priority: Normal	
Assignee:	
Category: Web Services clients/WMS	
Affected QGIS version: 2.14.13	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: invalid
Crashes QGIS or corrupts data: No	Copied to github as #: 24850

Description

I have a QGIS Cloud Pro account. Currently, I'm receiving the error message "ERROR: no more connections allowed (max_client_conn)" when I try to publish my maps. I don't understand what this means. I've done a little research that shows I'm allowed 60 database connections. However, I don't know what is meant by "database connection" in this context of QGIS Cloud. I'm not sure why I keep receiving this error message. My data keeps getting lost as it asks me for login credentials for a database, but I'm not sure as to what it's asking for. I've never set up login credentials for a specific database, just login credentials that I use to access all of my databases.

- Resolution set to *invalid*

- Status changed from *Open* to *Closed*

This isn't an issue with QGIS itself - you'll need to raise it with the creators of the QGIS Cloud Plugin.
