Affected QGIS version:	2.18.11	Regression?: Yes
Operating System:	Ubuntu 16.04	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 24907
Description Hello, I have installed QGIS 2.18.11 on Ubuntu 16.04. (Code-version commit:c6d8827) with ubuntu-gis-dependencies. QGIS runs with gdal 2.2.1. QGIS 2.18.11 with gdal 2.1.3 reads jp2-Files very slow. QGIS 2.18.11 with gdal 2.2.1 reads jp2 files quickly, but only a black rectangle is visible. The GDAL driver is JP2OpenJPEG. An other Driver for jp2 is not available on Ubuntu-Linux. Greetings Claas

why regression? did it work fine in a previous qgis or gdal release? seems very likely a gdal issue, have you asked in the proper channel?
or what about trying doing a translate with gdal_translate from the CLI? if you get a wrong result (black) then is definitely a gdal issue.

This might be highly dependent on the dataset. Please provide a link to the dataset.

#5 - 2017-09-25 04:16 PM - Giovanni Manghi

- Resolution set to not reproducible
