

QGIS Application - Bug report #17062

[Data-defined Assistant] Symbols preview doesn't update if "Apply transform curve" checkbox is unchecked

2017-08-24 05:36 PM - Harrissou Santanna

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 24961
Description		
<p>Point Layer Symbology Properties > select Assistant from the Data Defined button near the Size property</p> <p>In the new dialog, set the input options</p> <p>Expand the Apply transform curve: there is straight line</p> <p>Enable the checkbox and play with it --> The symbol representation will change accordingly in the right panel</p> <p>Uncheck the "Apply transform curve" option: instead of having the symbols restored at the initial representation in the right panel, you still get the transformed one.</p> <p>I can't tell whether this has an effect on the canvas given that no symbol is rendered (see #17061). But reopening the assistant dialog show the initial good preview with an unchecked "apply transform curve"</p>
