Description		
<p>Hi all,</p> <p>I have the following problem: if I delete one or more fields from a layer (shp) that contains no one record, the name of the first fields is changed when I save the data.</p> <p>It does not happen if the layer contains at least one object or if before/after delating field I add at least another field.</p> <p>How can I fix the problem?</p> <p>Thanks,</p> <p>Elisa</p>		

History
