

QGIS Application - Bug report #17167

Tables with boolean data types can't be saved

2017-09-20 12:13 PM - Andreas Neumann

Status: Closed	
Priority: High	
Assignee: Denis Rouzaud	
Category: Attribute table	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution:
Crashes QGIS or corrupts data: Yes	Copied to github as #: 25066
Description	
Attribute tables that contain columns with Boolean data types can't be saved with Python and also not in Processing (output saved via OGR).	
When saved via Python one receives the error message "unsupported type for field xxx"	
When saved via Processing all columns starting from the boolean field seems to vanish when save.

Hi Andreas, what tool in Processing?

#2 - 2017-09-21 11:55 AM - Andreas Neumann

Any tool in processing that saves a vector layer that contains boolean data types.

This is all related to the new introduction of the boolean data type in QGIS master where many of the tools are not aware of this data type.

Ok, so I think it is better to open a separate ticket to address the problem in Processing. Agree?

#4 - 2017-09-21 12:05 PM - Andreas Neumann

oh - sorry.

The "save problem" of data with boolean data types is pretty much everywhere (Python, Processing, probably more places I am not aware of)

Perhaps there is a central solution to all of the different places where it fails? I don't know.

Hi Andreas,

Are you able to share some demo/data project?

Or ideally Python and/or processing code?

Does it happen on any source type (PG vs others)?

On any destination or OGR only?

Thanks

Andreas, any chance to provide some demo data/script?

I will have a look at it early next week. I am on holidays and my wife doesn't appreciate me spending time online.

However, there is a good chance that meanwhile the issue was fixed already. I need to test it again.

#9 - 2018-02-14 10:30 PM - Nyal Dawson

I'm fairly certain that this was already fixed by commit:cb566178914933d864fad45cf359c6845961dc06
