

QGIS Application - Feature request #17174

Remember last input in Field Calculator

2017-09-21 11:11 AM - Juraj Betak

Status: Open	
Priority: Normal	
Assignee:	
Category: Field calculator	
Pull Request or Patch supplied:	Resolution:
Easy fix?: Yes	Copied to github as #: 25073
Description	
<p>Often, I need to repeatedly select some features and update the same attribute; the best way is to use Field Calculator. Now I do not need to always do 3 steps: 1 check <i>Update existing field</i>, 2 selecting field from the drop-down, 3 input value or equotation or select it from the <i>Recent</i>.</p> <p>I wish the Field calculator remembers my last input.</p> <p>Alternatively, there could be a checkbox in the Field Calculator: <i>Remember my last input</i></p> <p>It would improve productivity and lower human-induced errors.</p>

Hi,

Why don't you use the quick calculator bar

https://docs.qgis.org/2.18/en/docs/user_manual/working_with_vector/attribute_table.html#using-the-quick-field-calculation-bar (not written in the docs and

can not check right now but i think it also provides latest value)?
