

QGIS Application - Feature request #17265

Choosing 'layer\_styles' schema

2017-10-10 01:16 AM - Frédéric CLOITRE

Status:	Open	Resolution:  Copied to github as #: 25163
Priority:	Normal

Category:	Data Provider	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>For projects with shared spatial databases, it would be interesting to add the ability to choose the default schema to store the layer_styles table. In cases where each user has his own schema, there is no direct possibility to share the styles saved by default. layer_styles is created independently in each of the user shcemas.</p> <p>In my situation, I had to work around this constraint by creating views of a single public.layer_styles table for each user and automatically executed rules for the insert, update, delete actions to automatically save the new data in the main table public.layer_styles (cf. attachment). Regarding to source code: <a href="https://github.com/qgis/QGIS/blob/8deed6c49742bf01d4d49a369fe52a7100fcf107/src/providers/postgres/qgspostgresprovider.cpp">https://github.com/qgis/QGIS/blob/8deed6c49742bf01d4d49a369fe52a7100fcf107/src/providers/postgres/qgspostgresprovider.cpp</a></p> <p>Sincerely.</p>
