

QGIS Application - Bug report #17315

3D Viewer: QGIS Crash when activating 3D Map view and 3D renderer

2017-10-22 08:14 AM - Luca Casagrande

Status:	Feedback	
Priority:	High	
Assignee:		
Category:	3D	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows 7	Easy fix?: No
Pull Request or Patch submitted:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 25213
Description		
QGIS cc96f51e62 Installed with OSGeo4W64		
<ul style="list-style-type: none">- Load test data (but any other data didn't work for me)- Start the New 3D Map View- Enable 3D renderer in the Layer Styling Panel		
The crash report window will open without any contents. QGIS Main window does not respond.

History

#1 - 2017-11-07 09:15 PM - Anita Graser

- Related to Bug report #17416: Crash on enabling 3D renderer for point layer added

#2 - 2017-11-22 05:30 PM - Martin Dobias

Unfortunately I can't reproduce (on linux).

Could you try again if the crash dialog does not give you more information? I think there were some improvements to it recently.

If you just open 3D map view, that works? E.g. move map, zoom in/out?

Does it crash only if you try to enable 3D renderer for polygon data - or also for point/line data?

What is your graphics card by the way?

I think, my issue fits here. I'm trying to render a 3d house coming from PostGIS/DB Manager. I'm using simply: `SELECT 'POLYHEDRALSURFACE (((...))::geometry'` to create a layer (with or without Z). I can open the 3D view and navigate around, but my building is just flat. When I enable 3D rendering in the layer style settings, QGIS crashes.

Neither my own example (a house in CRS 28992) nor the simple examples from the PostGIS doc work. I'm using a very recent version of QGIS 2.99 on Win7. My stack trace looks like this (is it normal that there is no text behind the the double colons?):

Crash ID: 333c69e019367dd5f184c7bbd0fa4413b2e5b0f9

Spoke with Martin Dobias, issue true but possibly related to graphic card/drivers.

#8 - 2018-04-18 02:55 PM - Umberto Minora

This now seems to work with version 3.0.1-Girona. At least, upgrading to this version solved the problem I reported in #17788. Hope this helps you guys resolving this BUG Report.

- Status changed from Open to Feedback

Please try on QGIS 3.4.1, if the issue is still valid change the affected version, thanks.

#14 - 2018-12-05 07:30 PM - Kevin Garcia

In 3D map view, crashed while trying to change from overhead to an oblique-angle view. This happens every time I use the 3D renderer and change the view angle.

#17 - 2019-03-09 04:28 PM - Giovanni Manghi

Please check if this issue is still valid on QGIS 3.4.5 or 3.6.
