

## QGIS Application - Bug report #17330

### QGIS composer Multiline table cell formatting from xlsx data source

2017-10-25 01:35 PM - Arnaud Poncet-Montanges

<b>Crashes QGIS or corrupts data:</b> No	<b>Copied to github as #:</b> 25227
<b>Description</b>	
It seems like the "enveloppe le texte" option is taking the carriage return as a too long char to be displayed along with the last word of the line which creates some lines with just one word.

~~It seems that it can't be reproduce on other data sources.~~

~~Problem comes probably from special char in xlsx format.~~

~~Workaround will be to use another data source.~~

Text sample

Aucun nouveau bâtiment n'est projeté dans cette zone

Passage du mazout au gaz, ou installations solaires thermiques, ou les deux

Par ordre de priorité pour autant que cela soit techniquement et financièrement réalisable:

1. Assainissement thermique de l'enveloppe des bâtiments.
2. Remplacement des chaudières à mazout par des chaudières à gaz.
3. Installation de panneaux solaires thermiques pour la production d'eau chaude sanitaire tout en respectant les contraintes liées au patrimoine architectural de la zone.

In a multiline text(unlimited) attribute.

It seems that the space after . or : is no longer require for good carriage return!

Thanks for the fix!

Arnaud
