QGIS Application - Bug report #17425
Complex forms: in the sidebar of embedded forms records display as if they were edited

2017-11-08 07:43 PM - Andreas Neumann

Status:	Closed		
Priority:	Normal		
Assignee:	Matthias Kuhn

Crashes QGIS or corrupts data:		**Copied to github as #:**	25322

Description

Editing is not active in my case. I click on a feature with the identify tool and the form opens.

It is a complex form with relations and embedded forms. Some records in the side bars of embedded forms appear in red and italic, as if they were edited - which of course can't be if the edit state is on off.

I'll attach a screenshot.

All data is in Postgis.

Matthias has our project and database for testing.

Revision 61b2f74a - 2017-11-09 02:18 AM - Matthias Kuhn

Do not assume edit widget value changes on every signal

Widgets may on initialisation send out a notification that the value changed (from invalid to something sensible).

The attribute form should however only tell the rest of the world, that a value changed if the new value doesn't correspond to the one in the cached QgsFeature.

Fix #17425
