

QGIS Application - Bug report #17461

Applying the vector layer properties dialog when diagram legend is enabled should not collapse the layer symbology in the Layer Panel

2017-11-14 04:52 PM - Harrissou Santanna

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Diagrams	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 25358
Description		
<p>Create a categorized symbology on a layer and expand its symbology in the layer tree (it might be optional but better highlights the effects imo)</p> <p>In Vector Layer Properties dialog --> Diagrams, set a pie-chart diagram and add your fields</p> <p>In the Size tab, set a variable size in order to enable in the Rendering tab, the "legend entries for diagram size" button</p> <p>Click the button and open the Data-defined size legend dialog</p> <p>Check the Separated legend items</p> <p>Click OK and Apply in the layer properties dialog --> In the layer tree, you'll notice that the layer symbology has been collapsed, preventing you to see how the legend would look like in the layers panel (and legend in composer)</p> <p>Note that this collapsing effect doesn't happen when you choose the "Collapsed legend" option in Data-defined size legend dialog (the collapsed/expanded state of the layer is respected).</p>
