Category: Diagrams

Affected QGIS version:masterRegression?:NoOperating System:Easy fix?:No

Pull Request or Patch supplied: Resolution:

Crashes QGIS or corrupts data: Copied to github as #: 25361

Description

In Vector Layer Properties dialog --> Diagrams, set a pie chart diagram and add your fields
In the Size tab, set a variable size in order to enable in the Rendering tab, the "legend entries for diagram size" button
Click the legend entries button and open the Data-defined size legend

Select the "Separated legend items"

In the preview section the symbols are displayed as a square symbol.

I think the user would expect to see them the way they would be displayed in the legend, with real proportions and vertically aligned.
