I'm not able to test this because

- 1) the modeller GUI is pretty much broken in master
- 2) when trying to add a algorithm I get

```
ImportError: cannot import name 'ExpressionWidgetWrapperMixin'

| 1) the modeler GUI is pretty much broken in master

What do you mean? AFAIK, everything looks fine for me. Except this ticket with the python exception on the help button.

| 2) when trying to add an algorithm I get

I can't replicate. I just created a new model with some algorithms. I couldn't replicate

#3 - 2017-11-21 04:42 PM - Giovanni Manghi

I mean #17488

I just tried on clean master installation (from repo) on completely clean ubuntu 16.04 installation.

On that broken gui you can somehow double click to add an algorithm, and I got the above error.
