

QGIS Application - Feature request #1751

SVG Symbols: nothing shown if symbol file is missing

2009-06-27 01:03 PM - Mike Taves

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Symbology	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 11811
Description		
<p>If a QGS project file that uses custom SVG symbols is passed from one computer setup to another, the points that use the customized symbols are silently not displayed.</p> <p>Omitting the display of a symbol can be a serious flaw to the end user. At minimum, it would be nice to see the points, perhaps stylized as a circle question mark. In addition, a notice may be displayed when opening a project file notifying that it cannot find "mysymbol.svg", although this could be more annoying than useful for some folks.</p> <p>Perhaps, a better solution (and not intended for this ticket) would be to allow the user to embed certain SVG symbol definitions in the QGS file.</p>
