Hi Gerhard,

I noticed that in the 2.99 screenshot there is a small triangle indicating that some closed section of the form is available which could be unfolded.

If you click on that triangle - is the subform of the relation reference widget visible then?

#2 - 2017-11-23 01:24 PM - Gerhard Spieles

Hallo Andreas,

i had seen and tested this.

When you click and the triangle turned down, it seems that the rounding area changed a little bit, but the subform seems to be minimized and is not visible anymore.

Hi Gerhard,

I can not confirm this one in 2.99.0, code revision b59bd94e87.

Opening a QGIS 2.18.x project with subforms, they show up well on 2.99.

Can you share the project and some sample data to test?

Best regards,

Pedro

Hi Gerhard,

I confirm the problem here, with the "Autogenerate" attribute editor layout.

If you go to parent layer properties -> Attributes form -> change to "Drag and drop designer" attribute editor layout -> add the field from the relation (child_XXX) and everything works ok.

So this must be a problem with the Autogenerate layout in master. Someone with editing permissions should update the subject and the priority of this ticket.

Thanks Gerhard!

in qgis 3 :

i have this problem too

my layer and table are stored in postgis

this feature had worked well in prev version

thanks for soon correction
