

QGIS Application - Bug report #17575

Reshaping Curved geometries computes strange Z values

2017-11-28 07:05 PM - Regis Haubourg

Status:	Closed	
Priority:	Normal	
Assignee:	Paul Blottiere	
Category:	Digitising	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 25472
Description		
<p>Following #17574, reshaping a MulticurveZ with Z values set to 0, using reshape tool, will add a linestring with z = (default value - previous value) / 2</p> <p>In my case, I have vertices with Z = 0 and default Z value to 9000. Reshaping a part with 3 vertices gives me:</p> <div>0 0 4500 4500 4500 0 0</div>
