Easy fix?:	No		**Copied to github as #:**	25478

Description

Expression can be used to edit data and we should be able to control if we want to have them displayed in different contexts.

Using a python script to control that would be nice

Possibilities

- Python callback
- Python object with "push notification"
- An expression with some variables (my preference ;))

- Assignee set to David Signer

It should be implemented by [[https://github.com/qgis/QGIS/pull/6447]] when merged.

David and Nyall, I allow myself to reference you here :)
