| Description | | |
| <p>If I'm not mistaken, when loading the list of layers available from a WMS server GetCapabilities, QGIS keeps a copy of the corresponding GetCapability for future use.</p> <p>There doesn't seem to be any way to delete this cached GetCapability or set after how long it should be automatically deleted. It would be pertinent for users to have the capability to manually delete this QGIS-cached WMS GetCapabilities.</p> <p>There's at least two use cases where this feature is crucial: (A) when doing development work on a WMS server and the content of its GetCapabilities changes frequently, and (B) for time-enabled WMS servers where the time dimensions of layers on the WMS server change frequently, such as for weather layers served from WMS server. Thanks for considering -- Alex</p> | | |
