Easy fix?:	No	**Copied to github as #:**	25563

Description

When the help system fails to find a working page the user gets:

> *QGIS help is currently not available. This is likely because:*
>
> *No internet connection is available*
> *The offline help files are not available or the location of these files is not properly configured*
> *No help content is available for the requested topic*
>
> *Please check that the correct location of the offline help files is specified in the QGIS options dialog (Settings → Options →System).*

Maybe, the error message could show the last link it tried to open and couldn't find: it will help the user know if the error is local (URL badly constructed for example) or upstream (for example, some issues with docs site (redirection?)). See #17665.
