QGIS Application - Bug report #1767
Table Manager & Diagram Overlay

2009-07-13 07:44 AM - Giovanni Manghi

Status:	Closed		
Priority:	Low		
Assignee:	Borys Jurgiel		
Category:	Python plugins		
Affected QGIS version:		**Regression?:**	No
Operating System:	All	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	wontfix
Crashes QGIS or corrupts data:		**Copied to github as #:**	11827

Description

If I define a diagram overlay (properties -> diagram overlay) and then I change the table of attributes structure with the Table Manager plugin, when "save" is clicked the diagram overlay disappear together with its definitions.

If the table is altered with "properties -> attributes" there is no problem.

Tested on qgis 1.2 from trunk under Ubuntu 9.04

History

Still true on the actual trunk version. More over it seems that under windows when clicking "save" to save some change in the table structure, the operations always fails, forcing to use "save as" instead.

#3 - 2009-11-15 08:40 AM - Giovanni Manghi

It is normal that diagram overlays do stay on top of the map canvas, covering also other vector layers that are at a higher level in the legend?

#4 - 2010-06-17 12:26 PM - Borys Jurgiel

- Resolution set to wontfix

- Status changed from In Progress to Closed

Table manager is an external plugin. It doesn't modify the existing layer, it creates a new one and replaces it. It tries to preserve styles, but not labels nor diagrams.
