

QGIS Application - Bug report #17747

QGIS Server doesn't advertise the composer templates in the GetProjectSettings anymore

2017-12-25 08:45 AM - Tudor Bărăscu

Status: Closed	
Priority: High	
Assignee:	
Category: QGIS Server	
Affected QGIS version: master	Regression?: Yes
Operating System: Debian Buster	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Crashes QGIS or corrupts data: No	Copied to github as #: 25643

Description

I've noticed that for all the newly created projects (with master) the Server doesn't advertise the composer templates in the GetProjectSettings request.

Moreover, in Desktop -> Project Properties -> QGIS Server -> Exclude templates, when trying to add a composer in the list of the excluded ones, I cannot see the list of the composers that have been created to select the one that I want.

There's no need to add demo data to this bug as it's easily reproduceable:

- Create a new project and add a layer
- Create a composer template
- Trying to exclude that composer template from the QGIS Server settings doesn't show it so that it can be added
- QGIS Server doesn't advertise the template in a GetProjectSettings request for that project

History

Investigating further, currently, in Master, there are two print layouts:

- The old composer under the **Composer Manager** name

For this one, the composer templates are advertised but there are two issues:

- Unlike the QGIS 2 server, The request for GetPrint has reverse axis in the bbox- Web clients need to be reconfigured when using QGIS Server 3. Is there a way to advertise QGIS Server is version 3? I think currently not.
- Although the requests goes well, currently the layouts are only respected up to a certain point. e.g. the map frame for a template is not respected at the bottom and bleeds..

- The new composer under the **Layout Manager** name with the issue that the composer layouts are not advertised at all by QGIS Server, which is the original issue, as I was using the new layout manager.
