

QGIS Application - Feature request #17829

[Layer Styling Panel] Unable to identify the current style of a layer

2018-01-09 07:43 PM - Harrissou Santanna

Status:	In Progress	
Priority:	Normal	
Assignee:	Matthias Kuhn	
Category:	Symbology	
Pull Request or Patch supplied:	Yes	Resolution:
Easy fix?:	Yes	Copied to github as #: 25724
Description		
<p>If you have a layer with at least two styles created, in the layer styling panel, Style Manager (?) tab, there's no way to know which one is currently applied to the layer other than opening the layer properties dialog. When using styles as part of complex map themes, knowing which style is being used (to avoid misleading modification) is really important and relying to layer properties dialog (for this information) makes the layer styling panel a bit useless</p>

- Easy fix? changed from No to Yes
- Pull Request or Patch supplied changed from No to Yes
- Assignee set to Matthias Kuhn
- Status changed from Open to In Progress

Hi Harrissou,

agreed!

We have a PR in the hoven with Matthias, for adding the style name in the title bar :

<https://github.com/qgis/QGIS/pull/5900>

See original discussion here where we also need to add import-export capabilities of style sub sections (symbology, label, forms...)
