

QGIS Application - Bug report #17861

SQLite REAL numbers displayed as too many digits in Attribute Table

2018-01-15 09:51 PM - Kory Roberts

Status: Closed	
Priority: Normal	
Assignee: Alessandro Pasotti	
Category: Attribute table	
Affected QGIS version: master	Regression?: Yes
Operating System: Linux Mint 18.3 Cinnamon	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Crashes QGIS or corrupts data: No	Copied to github as #: 25756
Description	
<p>In an SQLite/Spatialite database I have fields as type REAL. These are displayed in the Attribute Table with too many digits (often many zeros or 9's). This bug seems to have just shown up (but I believe it was also temporarily in a previous version of QGIS as well).</p> <p>Example 1: SQLite value = 35.990605 QGIS Attribute Table display = 35.990605000000002</p> <p>Example 2: SQLite value = -90.248519 QGIS Attribute Table display = -90.248519000000002</p> <p>In attempting to examine this bug more deeply, I created a Spatialite database from within QGIS (Layer -> Create Layer -> New Spatialite). It seems type decimal number are assigned as FLOAT in SQLite, but may be better (i.e. more correct by SQLite documentation) to assign as REAL.</p> <p>It appears the QGIS attribute table is treating fields of type FLOAT and REAL with different display (only REAL has bug), but in SQLite there is no difference in affinity.</p> <p>http://sqlite.org/datatype3.html</p>

Revision 1adc55f3 - 2018-01-31 09:24 AM - Alessandro Pasotti

[bugfix] Lower priority of range widget for doubles

This was the root cause of several critical bugs with data corruption in the attribute table and forms: SpinBox has a fixed number of decimal places, which makes it not ideal for floating points because most of the times it rounds the number changing it when in edit mode even if the user has not really modified the value by writing in the spin box or using the controls.

So, the default is now back to the line edit (which has

bugs in the validator, but that's another less critical and separate issue).

Partially fixes #17861

Partially fixes #18007

History

#1 - 2018-01-16 04:30 AM - Kory Roberts

OK, turns out both FLOAT and REAL show the same bug after all (after file reload?).

Can you please attach a small spatialite test file with your tests?

What is the expected behavior?

Is there a way to automatically determine what is the right number of digits that has to be shown?

I mean that floating point numbers representation is not exact, converting back and forth from the DB backend to QGIS internal representation is always going to have some small rounding errors.

| *Can you please attach a small spatialite test file with your tests?*

I guess not since even the smallest spatialite file seems to exceed 5MB. I recreated the behavior by...

Layer -> Create Layer -> New Spatialite File...

Geometry as point, add new decimal number field ("field_a").

Now add point to the map, enter 34.05 as field_a.

Open attribute table.

Cell displays as 34.049999999999997.

Click on cell in edit mode...back to 34.05.

More testing...

QGIS DB Manager displays as 34.05.

spatialite_gui displays as 34.050000. <- Same "bug"????

(fresh database and table created by spatialite_gui shows same behavior)

sqlitemanager.xul (Firefox add-on) displays as 34.05.

DB Browser for SQLite displays as 34.05.

| *What is the expected behavior?*

Consistency, I guess. The number of decimals can be used to indicate level of precision, particularly if a field contains lat/long data. 34.05 means less is known about lat for location than 34.04999, for example.

Both QGIS attribute table and spatialite_gui have the same thing going on for some reason, but nothing else I was able to test handles the data display in that way. For everything else, if 34.05 is entered, then 34.05 is displayed...which, in my view, should be the expected behavior.

#7 - 2018-02-01 07:57 AM - Alessandro Pasotti

Please test the latest commits, all tests should be done with a new project because the default widgets for fields have changed.

#8 - 2018-02-01 07:57 AM - Alessandro Pasotti

- Resolution set to fixed/implemented
