

QGIS Application - Feature request #17922

Add an option to store data defined label position as an offet instead of raw coordinates

2018-01-22 12:30 PM - Dominique Lyszczarz

Status:	Open	Resolution: Copied to github as #: 25818
Priority:	Normal	
Assignee:		
Category:	Labelling	
Pull Request or Patch supplied:	Not supplied	
Easy fix?:	No	
Description		
<p>Data defined labels allows to manually place any label by moving it with a mouse click & drag. But the new defined position is stored as raw coordinates so it makes sense only for the current scale. By storing the new position as an offset in paper like units (mm, inches, pixel ...) then it would allow to maintain the defined position at any scale while having the ability to move the label by click & drag.</p>
