QGIS Application - Bug report #17948

"Coordinate Reference System Selector" query/window after processing.run()

2018-01-24 01:03 PM - Mike Blechschmidt

Status: Closed Priority: Normal

Assignee:

Category: Processing/OGR

Affected QGIS version:masterRegression?:YesOperating System:Easy fix?:No

Pull Request or Patch supplied: Resolution: fixed/implemented

Crashes QGIS or corruptes data: Copied to github as #: 25844

Description

Convert a **DXF** with processing(plugin)

@processing.run('gdal:convertformat', {'INPUT': 'd:/tar/mytest.dxf', 'OPTIONS':", 'OUTPUT': 'c:/../x.shp'})

The query of the CRS is absolutely superfluous, since no transformation should take place and also no projection file must be written.

The code for QGIS 2.xx

processing.runalg('gdalogr:convertformat','d:/tar/mytest.dxf',0,None,'c:/../x.shp')

works without Problems (without window)

[processing] Correctly supress CRS selector dialog when testing input layer validity

TODO: we NEED a non-hacky way to supress this dialog and allow

invalid CRS for layers!

Why is the crs irrelevant? You still need to specify one whenever you load a layer with an unknown crs into QGIS (or set a default one in options)

#3 - 2018-01-25 07:55 AM - Mike Blechschmidt

This command does not load a layer into QGIS. There is only one format conversion DXF -> Shape without transformation.

In 2.xx basically no CRS was asked at this point.

btw:

With a shape as source (without *.prj) also in 3.0 no CRS is queried!
